

# COOPERATIVE ECONOMIC INSECT SURVEY REPORT

Glenn A. Salsbury, Survey Entomologist

Report 9, Volume 55

August 3, 2007

## HORTICULTURAL INSECTS

MIMOSA WEBWORM: Moths are now flying in Southeast Kansas.

NANTUCKET PINE TIP MOTH: A heavy flight is now underway in the Kansas City area. Severe damage was noted in a nursery to Scotch pines. Because of the damage the grower was going to destroy the trees.

FALL WEBWORM: Webbing is now very noticeable on a variety of trees. Some newly hatched larvae were found in a nursery in the Kansas City area.

PINE SAWYER: One dying pine in a nursery was cut down and found to have numerous larvae. Blue stain was also present.

SOD WEBWORMS: There is a heavy flight of several species currently ongoing in Southeast Kansas.

APHIDS: Heavy on some oaks causing leaves to be covered with honeydew.

PINE PITCH MOTH: Larvae are now entering the pupal stage in Northwest Kansas.

## ALFALFA

CELERY WEBWORM and GARDEN WEBWORM: Heavy flight of both species currently in progress in Southeast Kansas. Alfalfa growers who plan to plant in the near future should be alert for these two pests of seedling alfalfa.
